

FREJA Road API

The logo for FREJA, featuring the word "FREJA" in a bold, white, sans-serif font inside a red-bordered square. The background of the top right corner of the page shows a satellite view of Earth with glowing network lines connecting various points.

WHAT IS API?

API (Application Programming Interface) is a modern plug-and-play solution for data exchange between systems.

HOW DOES FREJA API WORK?

FREJA API is a great alternative to traditional EDI connections when it comes to making bookings, printing labels, tracking shipments, and more.

An integration with FREJA API will increase efficiency and reduce errors and can be integrated into any system that supports API data exchange.

The solution offers self-service implementation with online access to instruction manuals and online support from our integration team.

FREJA API utilizes a secure and reliable connection for data exchange to ensure the highest level of security for you and FREJA.

With the possibility to book transports and request labels and CMR, it is possible to optimize the full transport process, as well as providing tracking for all parties including the end receiver.

WHO IS FREJA API FOR?

Our API is recommended for all companies who have the possibility and competences of building API integration.
