

FREJA standard EDI

WHAT IS FREJA STANDARD EDI?

FREJA has prepared a set of standards in XML and EDIFACT, which can be exchanged via SFTP or a similar protocol.

HOW DOES FREJA STANDARD EDI WORK?

The set of standards covers the entire booking process, from you sending the transport order, and afterward receiving a confirmation and tracking updates.

Sending the orders via XML/EDIFACT will increase efficiency and reduce errors. Furthermore, it can be integrated into any system that supports data exchange in XML/EDIFACT via SFTP. Our solution has proven to be very stable, reliable, and effective.

The feedback of confirmation and tracking updates can be implemented to show the progress of the orders and transports.

The solution offers examples and documentation for the building task, and our integration team will ensure support and provide an implementation plan for going live.

As part of the standard setup, it is also possible to provide goods labels or CMR notes electronically to ease the preparation of your goods.

WHO IS FREJA STANDARD EDI FOR?

Our EDI is recommended for medium-sized and large companies with IT skills to build and support EDI connections via XML or EDIFACT.
